

# AHMED JUNAID

(647) 271-3151 – Toronto, ON

[ahmed.junaid13@outlook.com](mailto:ahmed.junaid13@outlook.com) ♦ <https://www.linkedin.com/in/ahmed-junaid/> ♦ <https://ahmedjunaid13.github.io/>

## OBJECTIVE

---

Motivated Mechatronics Engineering student with hands-on experience in automation, equipment validation, and multidisciplinary engineering projects. Skilled in robotics, control systems, and technical problem-solving, with strong abilities in troubleshooting, system integration, and delivering practical engineering solutions. Seeking a 4-month Engineering co-op for Winter 2026 to apply technical knowledge, strengthen design and programming skills, and contribute value to a high-performing engineering team.

## SUMMARY OF QUALIFICATIONS

---

### Technical Skills

- Programming: C, Python, MATLAB, Java, R
- Robotics & Automation: KUKA KR6, ABB IRB 1200, pneumatics, motion control, safety systems
- Control & Industrial Software: RSLogix 500, Studio 5000, FactoryTalk View, Multisim
- Design & Simulation: SOLIDWORKS, AutoCAD, FPGA/Vivado
- Engineering Tools: 3D laser scanning, multimeters, thermal imaging, vibration analysis, circuit testing
- Productivity: Microsoft Excel, Google Sheets, PowerPoint, Google Slides

### Soft Skills & Team Value

- Strong analytical mindset with solid troubleshooting ability and quick adaptability in hands-on engineering environments
- Clear, confident communicator with experience collaborating across technical and non-technical teams
- Proven leadership through mentoring, team coordination, and consistently delivering organized, high-quality work

## EDUCATION

---

**Bachelor of Engineering, Mechatronics Engineering (Honors)**, Humber Polytechnic Expected 2027

- Consistently recognized on the Dean's List for high academic performance.
- Built strong teamwork and problem-solving abilities through hands-on projects and student involvement.

## EXPERIENCE

---

**QA Engineering Intern** May 2025 - Dec 2025  
FGF Brands *Toronto, Canada*

- Performed equipment validations and process checks to ensure reliability, accuracy, and operational efficiency.
- Assisted in investigations and audits by gathering data, identifying issues, and supporting corrective actions.
- Supported commissioning of new lines by verifying functionality, testing systems, and coordinating with cross-functional teams.

**Sales Representative** Mar 2023 - Present  
TELUS *Toronto, CA*

- Consistently exceeded sales targets through strong communication and customer-focused problem solving.
- Delivered tailored product and service solutions across multiple programs, improving overall store performance.
- Built strong relationships with technical and installation teams to ensure smooth service completion.

## Engineering Intern

Goltens Red Sea

May 2023 - Aug 2023

*Jeddah, KSA*

- Performed hands-on maintenance and diagnostics on electrical and mechanical systems using industry tools such as multimeters, thermal imaging, and vibration analysis.
- Supported integration of mechanical, electrical, and software components into functional system-level solutions.
- Worked with multidisciplinary teams to troubleshoot faults, perform repairs, and ensure equipment readiness under tight timelines.

## PROJECTS

---

### Multi-Agent AI Query System Using Databricks

FGF Brands Hackathon

July 2025

*Toronto, CA*

- Built a Databricks-based framework that coordinated multiple specialized LLM agents for accurate, context-aware responses.
- Improved workflow efficiency by automating data queries, reporting steps, and product-count tasks.

### Box Erector Machine - Design and Build

Mechatronics Project

Sept 2023 - May 2024

*Toronto, CA*

- Designed a functional automated box erector using SOLIDWORKS, AutoCAD, 3D-printed components, and custom wiring.
- Integrated sensors, actuators, and control logic to achieve reliable system performance.
- Coordinated mechanical and electrical assembly while producing clear technical documentation.

### Industrial Robotics Programming and Automation

Robotics Project (ABB Robotic Arm Programming and Automation)

Sept 2024 - Dec 2024

*Toronto, CA*

- Programmed linear and circular paths with MoveL/MoveC commands and optimized speed/zone values.
- Developed modular routines with conditional logic and sensor inputs for adaptive automation tasks.
- Tuned motion precision to balance accuracy and cycle time across different trajectories.

## ACHIEVEMENTS AND INTERESTS

---

- Recognized for outstanding leadership through active roles in the Engineering Club and as President of the Muslim Students' Association (MSA).
- Passionate about health and athletics: gym member and active soccer team player.
- Personal interest in statistical analysis of financial currencies, focusing on trends, patterns, and data-driven insights.
